

COMMITTEE CHAIR VERN SCHAEFER, PH.D., P.E.

Deep Foundations for Landslides and Slope Stabilization

The committee has been working on two research tasks that are funded by the DFI Committee Project Fund:

- Design Comparison of Slope Stabilization Methods
- A New Innovative Method for Analysis of Lateral Loading of A-Walls

Additionally, the committee is planning a special issue of the *DFI Journal* focused on deep foundations for slope stabilization.

Our big event, S3: Slopes, Slides and Stabilization Seminar, taking place August 1-3 at the Westin Denver International Airport was organized in conjunction with the Tiebacks & Soil Nailing Committee.
